Final Project

Exclusive Video Games Online Store

User Story:

For this project, I wanted to create an video game online store so that users can shop for their favorite video games. This is not just an ordinary video game store that users can buy games that they can play in different consoles, but these games that are in my website are exclusive games meaning that all games that are in display can only be played under one console only. As a user, I want to shop and explore the variety of video games that are only exclusive to my console and if I like a certain games from a console that I do not own, I can consider the possibility to purchase that console so I can enjoy playing my desired video games. The appearance of the webpage has a presentable look by using bootstrap so that users can search for games, click on the name of a game so that the user can get more information about the desired game. Users are able to navigate to different webpages based on each console to find a game and add it to the shopping cart.
